

Jan Snellman

Period 1, Group theory

Period 2, rings and fields

Abstract Algebra, Lecture 1

Overview of the course

Jan Snellman¹

¹Matematiska Institutionen
Linköpings Universitet

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group
theory

Period 2, rings and
fields

Summary

1 Period 1, Group theory

The integers
Binary operations
Groups, introduction
Cyclic groups
Permutation groups

Cosets

Direct products
Homomorphisms
Group actions

2 Period 2, rings and fields

Ring theory
Field theory

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group
theory

Period 2, rings and
fields

Summary

① Period 1, Group theory

The integers
Binary operations
Groups, introduction
Cyclic groups
Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

② Period 2, rings and fields

Ring theory

Field theory

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

The integers

- Divisibility
- Primes, unique factorization
- Greatest common divisor
- Division with remainder
- Euclidean algorithm, Bezout
- Diophantine equations
- Congruences

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

Binary operations

- Examples
- Associativity
- Semigroups, monoids
- Maps from a finite set to itself
- Free monoid
- Units, inverses

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

Groups

- Definition
- S_X
- Inverse, units, cancellation, linear equations
- Abelian groups
- Cyclic groups
- Direct sums
- Subgroups
- Cayley (multiplication) table
- Symmetry groups, dihedral groups

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

Cyclic groups

- Power laws (exponents)
- $\langle g \rangle$
- Examples: the circle, \mathbb{Z} , \mathbb{Z}_n , U_n .
- Order of an element, definition
- Subgroups of cyclic groups
- Order of power of elements, and of products of elements
- Classification of cyclic groups
- $\langle S \rangle$
- Free groups (brief overview)
- U_n , primitive roots

Jan Snellman

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

Permutation groups

- S_X
- S_n
- Representations of permutations: graphs, matrices, one or two row tables
- Permutation statistics
- The sign of a permutation, the alternating group
- Disjoint cycle factorization
- Products of transpositions
- Cycle type
- Permutation representation of a finite group
- Matrix representation

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPINGS UNIVERSITET

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

Cosets

- Left and right cosets
- Examples, S_3 , symmetry group of cube
- Lagrange's theorem
- Fermat's and Euler's theorems
- The size of HK
- Normal subgroups

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPINGS UNIVERSITET

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

Direct products

- Exterior direct product
- Inner direct product
- Abelian groups: torsion subgroups, p -groups
- Structure theorem for finite abelian groups
- Exampels

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

Homomorphisms

- Definitions, kernel
- Examples
- Congruence
- Quotient groups
- Isomorphism theorems
- Correspondence theorem
- Simple groups

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPINGS UNIVERSITET

Period 1, Group theory

The integers

Binary operations

Groups, introduction

Cyclic groups

Permutation groups

Cosets

Direct products

Homomorphisms

Group actions

Period 2, rings and fields

Group actions

- Definition
- Examples
- Orbits, stabilizers, fixed points
- Orbit-Stabilizer relation
- Burnside's lemma
- Class equation, center, centralizer, normalizer, conjugacy classes
- Sylow's theorems

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group
theory

Period 2, rings and
fields

Ring theory

Field theory

Ring theory

- Definition, simple properties
- Ideals, homomorphisms, quotients
- Ideal operations

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group
theory

Period 2, rings and
fields

Ring theory

Field theory

Polynomial rings

- Degree, division with remainder, gcd
- Ideal theory for polynomial rings, they are PIDs
- Unique factorization
- Quotients of polynomial rings

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group
theory

Period 2, rings and
fields

Ring theory

Field theory

Unique factorization domains

- Polynomial rings in several variables
- Gaussian integers

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group
theory

Period 2, rings and
fields

Ring theory

Field theory

Field extensions

- Simple extensions, algebraic extensions
- Degree of extension
- Splitting fields

Jan Snellman

TEKNISKA HÖGSKOLAN
LINKÖPING UNIVERSITET

Period 1, Group
theory

Period 2, rings and
fields

Ring theory

Field theory

Finite fields

- Construction
- Uniqueness
- Multiplicative group is cyclic
- Applications: coding theory, LFSR,...
