 $z(1+h, 2+k) = z(1,2) + z'_x(1,2)h + z'_y(1,2)k + \text{restterm.}$

$z(1,2) = 1 + 1 \cdot 2^2 = 5$, så $(1,2,5)$ ligger på grafen

a) $f(x,y) = x^2 + y^2$ $\Rightarrow f'(x,y) = (2x, 2y)$ $\Rightarrow f'(1,1) = (2, 2)$

$$f''(1,1) = \begin{pmatrix} 2 & 0 \\ 0 & 2 \end{pmatrix} \quad \Rightarrow \quad f''(1,1) = \begin{pmatrix} 2 & 0 \\ 0 & 2 \end{pmatrix}$$

4.10a)

$$\frac{f(h,0) - f(0,0)}{h} = \frac{\frac{h^3}{h^2} - 0}{h} = 1 \rightarrow 1 \text{ då } h \rightarrow 0$$

så $f'_x(0,0) = 1$

$$\frac{f(0,k) - f(0,0)}{k} = \frac{\frac{k^4}{k^2} - 0}{k} = k \rightarrow 0 \text{ då } k \rightarrow 0$$

så $f'_y(0,0) = 0$.

$$\begin{aligned} R(h,k) &= \frac{f(h,k) - f(0,0) - 1 \cdot h - 0 \cdot k}{\sqrt{h^2 + k^2}} = \\ &= \frac{\frac{h^3 + k^4}{h^2 + k^2} - 0 - h}{\sqrt{h^2 + k^2}} = \frac{h^3 + k^4 - h^3 - hk^2}{(h^2 + k^2)^{3/2}} \end{aligned}$$

f är differentierbar i $(0,0)$ om och endast om $\text{delt} \rightarrow 0$ då $(h,k) \rightarrow (0,0)$.

Men längs kurvan $h=k$ får vi

$$R(h,h) = \frac{h^3 + h^4 - h^3 - h^3}{2^{3/2} h^3} = \frac{h-1}{2^{3/2}} \rightarrow \frac{-1}{2^{3/2}} \neq 0$$

då $h \rightarrow 0$. Alltså är f inte differentierbar.

Men $\frac{x^3 + y^4}{x^2 + y^2} = p(\cos^3 \varphi + p \sin^4 \varphi) \rightarrow 0$ då $p \rightarrow 0$

så $f(x,y) \rightarrow 0$ då $(x,y) \rightarrow (0,0)$.

Så $f(x,y)$ är kontinuerlig i $(0,0)$.

(Alla f är kontinuerliga i alla andra punkter enligt standardresultat för gränsvärden.)

4.10 b)

$$f(x, 0) = 1 \quad \text{för alla } x, \text{ så}$$

$$f'_x(x, 0) = 0 \quad \text{för alla } x.$$

$$f(0, y) = 1 \quad \text{för alla } y, \text{ så}$$

$$f'_y(0, y) = 0 \quad \text{för alla } y.$$

(Att f'_x, f'_y existerar om $(x, y) \neq (0, 0)$ är uppenbart då $f(x, y) = \frac{(x+y)^2}{x^2+y^2}$ där...)

Men

$$f(x, -x) = \frac{0}{2x^2} \rightarrow 0 \quad \text{då } x \rightarrow 0,$$

så vi har inte att $f(x, y) \rightarrow 1$ då $(x, y) \rightarrow (0, 0)$.

c)

$f(x, 0) = 0$ per definition för alla x , och
om $y \neq 0$: $f(0, y) = y^2 \arctan 0 = 0$, så $f(0, y) = 0$ för alla y .
så $f'_x(x, 0) = 0$ och $f'_y(0, y) = 0$ för alla x, y .

$$\begin{aligned} & \left| \frac{f(h, k) - f(0, 0) - 0h - 0k}{\sqrt{h^2 + k^2}} \right| \\ &= \left| \frac{k^2 \arctan(h/k^2)}{\sqrt{h^2 + k^2}} \right| \leq |k| |\arctan(h/k^2)| \leq \frac{\pi}{2} k \\ &\rightarrow 0 \quad \text{då } (h, k) \rightarrow (0, 0) \end{aligned}$$

Så f är differentierbar i $(0, 0)$

Men för $y \neq 0$ gäller

$$f'_x = y^2 \cdot \frac{1}{1 + \left(\frac{x}{y^2}\right)^2} \cdot \frac{1}{y^2} = \frac{1}{1 + \frac{x^2}{y^4}} = \frac{y^4}{x^2 + y^4}$$

så $f'_x(0, y) = 1 \rightarrow 0$ då $y \rightarrow 0$.

4.11

$$\begin{cases} z'_x = y e^{x^2 y^4} \\ z'_y = x e^{x^2 y^4} \end{cases}$$

$$z''_{xy} = (z'_x)'_y = \frac{\partial}{\partial y} (y e^{x^2 y^4}) = e^{x^2 y^4} + 4y^4 x^2 e^{x^2 y^4}$$

$$z''_{yx} = (z'_y)'_x = \frac{\partial}{\partial x} (x e^{x^2 y^4}) = e^{x^2 y^4} + 2x^2 y^4 e^{x^2 y^4}$$

$z''_{xy} \neq z''_{yx}$ så kan ej findes $z \in C^2$ som udfylder dette.
